# Entrust Verified Signing Solutions

Put identity and security at the core of your signature workflows

## High assurance e-signatures for secure transactions and agreements

Our verified signing solutions enable digital transformation and alignment to global security frameworks such as Zero Trust, with products and services designed to support digitization of business-critical electronic documents and agreements, including:

- Sales and customer paperwork
- Contracts and agreements
- Human resources forms/paperwork
- Notarized letters
- Healthcare forms/paperwork, and more

We provide a comprehensive suite of solutions that can:

- Integrate verified signing workflows directly into “core” processes and applications within your environments
- Enhance your existing electronic signature workflows and platforms by providing stronger assurance of identity and document integrity

## KEY BENEFITS

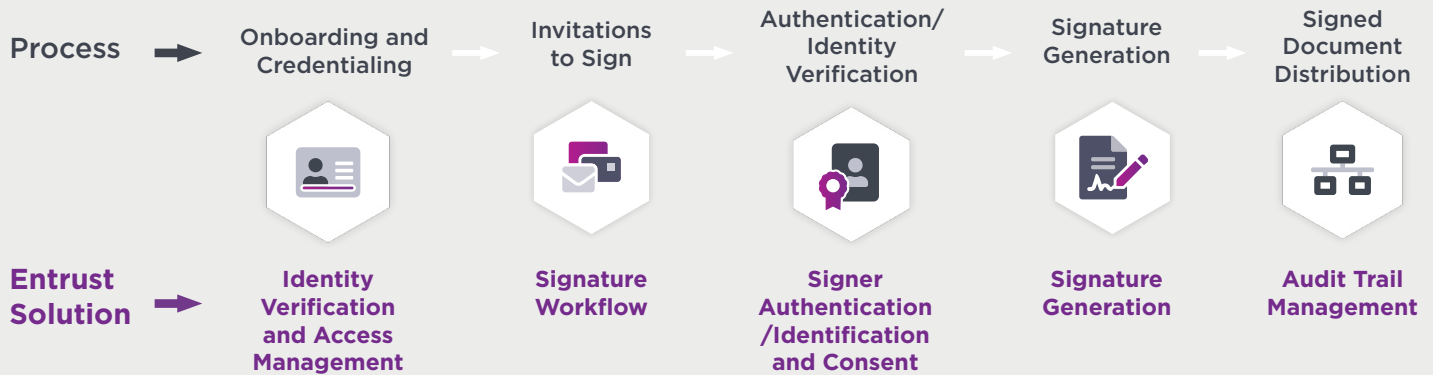

- Limit the risks of reputational damage by fighting fraud related to digital documents, signatures, and identities
- Improve employee and customer experience with quicker, more efficient, more user-friendly processes
- Optimize the deployment of integrated agreement workflows in a secure, efficient way
- Upgrade existing electronic signing processes to help strengthen legal assurance
- Support compliance with local regulations for digital agreements

# Verified Signing Solutions

## How it works

## The portfolio

The different products and services supporting Entrust Verified Signing Solutions can be individually integrated into your existing environments or bundled into a full-stack signing process.

### Entrust Signhost

A cloud-based service to orchestrate e-signature requests, signer authentication, signature and seal generation, audit trails, and document distribution.

### Entrust Signing Automation Service

A cloud-based service issuing and hosting organization-branded digital certificates for generating secure digital seals. eIDAS-qualified certificates for advanced document sealing are also available.

### Entrust Remote Signing Service

A cloud-based service issuing and hosting digital certificates for generating secure digital signatures. eIDAS-qualified certificates for qualified signatures are also available.

### Onfido (an Entrust company) Real Identity Platform

A suite of cloud-based, AI-driven services around remote identity verification: ID checking, liveness checking, and document verification.

### Entrust Identity as a Service (IDaaS)

A cloud-based service providing trusted identity and access management for workforces, consumers, and citizens - including single sign-on and multi-factor authentication.

# Verified Signing Solutions

## Use Cases

<b>Digital signatures for employees using an Adobe-trusted certificate</b>	Enable your workforce to generate trusted digital signatures using Entrust digital signing certificates combined with Entrust Signhost or a compatible third-party service such as Adobe Acrobat Sign.
<b>“Federated” electronic signatures for employees and customers leveraging single sign-on from your IAM service</b>	Leverage your corporate IAM solution to enable customers and employees to sign using their SSO credentials. The audit trail will include the signers’ attributes shared during the SSO process.
<b>eIDAS-qualified signatures for employees</b>	Employees are considered frequent signers. Enable them to generate eIDAS-qualified signatures using a long-lived certificate stored in the Entrust cloud, integrated with Entrust Signhost or a compatible third-party service such as Adobe Acrobat Sign.
<b>eIDAS-qualified signatures for customers</b>	Customers only sign occasionally. Enable them to generate eIDAS-qualified signatures using a short-lived certificate stored in the Entrust cloud, integrated with Entrust Signhost.
<b>Electronic signatures with on-the-fly identity verification</b>	Integrate our remote identity verification process before a document is signed. Use our out-of-the-box module or build custom verification workflows using Onfido (an Entrust company).
<b>Full user onboarding and signing</b>	Most onboarding processes will include documents to sign. Combine our identity verification service with our IAM service and signing service to manage your customers’ and employees’ entire lifecycle and benefit from best-in-class identity verification, access, authentication, and signing mechanisms.
<b>Manual document sealing</b>	Enable enrolled employees to generate on-demand digital seals on documents using Entrust Signing Automation Service and Entrust Signhost, or any compatible third-party service.
<b>Automated document sealing</b>	Deploy an automated document sealing process, either as part of a document signature or to mitigate the risk of fraud and forgery of your corporate documents.

# Verified Signing Solutions

## Need a custom signature workflow?

### Identities we support

#### Self-issued identity

A basic method of verifying an identity using email verification or one-time password, with an optional scribble.

#### Corporate identity

Generated by your organization using your identity verification (IDV) process or our IDV. The identity information can be managed by an identity provider, such as Entrust IDaaS, and leveraged for signing using single sign-on or used for only a portion of the signature process.

#### Federated trusted (public) eID

A type of identity verification that uses third-party institutional providers to authenticate personal information based on SAML/OIDC.

#### Identity from trust service provider

Based on PKI/cloud signature protocol. Users go through a regulated IDV process managed by a trusted authority, such as Entrust. They receive a digital certificate that can be used to generate identified and secure signatures.

#### Government ID

National passport or ID card in combination with a biometric verification.

### Signature types we support

#### Standard signatures

- PKCS #11 API
- Cloud Signature Consortium (CSC) Remote Signing API
- SAML
- OpenID Connect (OIDC)

#### Advanced signatures

- Standard signature + Adobe-trusted digital seal (generic or company-branded)
- Standard signature + eIDAS advanced digital seal (generic or company-branded)
- Adobe-trusted digital signature

#### Qualified signatures

- EU eIDAS-qualified signature

### Protocols we support

- Email verification
- One-time password
- Scribble
- REST API

# Verified Signing Solutions

## The Entrust advantage

Entrust is a long-standing expert in PKI infrastructures, identity verification solutions, identity management solutions, and digital signing solutions. This unique combination of expertise and in-house products makes us a leading provider of custom solutions for identified signing.
